

## LOCK PACK Keyless Lockout Solution

- Affordable and simple solution for locking off MCBs, plugs, and fused spur sockets
- Unique 3-digit combination, no keys required, and resettable functionality
- MCB lock affixes directly to the main switch, RCD or MCB
- Ensures safety and compliance with industry regulations
- Two 'DO NOT OPERATE' tags included
- Promotes safe working practices
- Suitable for various applications
- Robust and durable design
- Quick and easy to use

### Description

The LOCK PACK is a collection of three locking devices designed by Socket & See to provide an easy and affordable way to secure electrical installations. Each device features a 3-digit combination that can be set by the user and reset as required.

The MCB LOCK is specifically designed to secure most commonly found MCBs, RCDs and mains switches. To use it, set the combination, place the device over the MCB switch, and lock it using the combination.

The PLUG LOCK is designed to lock off any 3-pin 13 Amp 240v BS 1363 UK plug. To use it, set the combination, place the device over the plug pins, and turn the screw until it securely contacts the earth pin. Then, gently pull the plug to ensure it is attached and lock it using the combination.

The FUSE LOCK is designed to secure any fused spur socket. To use it, set the combination, remove the fuse from its holder, place the device over the empty fuse holder, and screw the pin down to fasten the FUSE LOCK into place. Finally, lock it using the combination.

Each device is unique due to the customisable combination feature and there are no keys to lose. These devices can help to prevent accidental energising of electrical installations and promote safe working practices.
