

**SOCKET
& SEE™**

**SPK65KIT
Industrial Socket
Tester Kit**

- Combines industrial socket tester and dedicated carry case
- Verifies three phase wiring quickly and clearly
- Provides clockwise LED rotation for correct phase sequence
- Alerts wiring faults with anti clockwise LED rotation
- Emits continuous tone for correct connections
- Emits warbling tone to indicate wiring errors
- Confirms protective earth presence with separate indicator
- Suitable for testing larger 32A sockets using ADP65 adapter
- Durable rubber holster improves grip and impact resistance

Description

Socket & See SPK65KIT Industrial Socket Tester Kit brings together reliable three phase socket testing and secure instrument storage in one practical package. Designed for busy electrical professionals, it combines the trusted SOK65 tester with the robust TECC40 carry case. As a result, you can test, confirm and transport your equipment with confidence.

The Socket & See SPK65KIT provides fast verification of L1, L2 and L3 phases. Once connected to a live supply, clear LED indicators show phase presence and rotation. Green LEDs rotate clockwise to confirm correct wiring, while red LEDs rotate anti clockwise and activate a warbling tone to flag errors. In addition, a fourth LED confirms the presence of a protective earth conductor for added safety checks.

Accurate phase sequence identification is essential on industrial sites. Therefore, this kit gives instant visual and audible feedback to reduce guesswork and speed up fault finding.

The continuous tone confirms correct wiring, helping users make quick decisions before energising equipment.

Alongside testing performance, the Socket & See SPK65KIT ensures your equipment stays protected in transit. The TECC40 carry case features four padded compartments to separate testers, meters and accessories. Twin zips allow the case to open fully, while an internal pocket keeps manuals and certificates close at hand.

Whether you are carrying out installation checks or routine inspections, the Socket & See SPK65KIT supports safe and efficient working. Its durable rubber holster and strong fabric case stand up to daily use. Together, they offer a dependable solution for industrial socket verification and organised storage.
